1. Presentation of the subject

The nursing profession has evolved profoundly in response to socioeconomic changes and the discipline's own maturation. This development has reinforced its strategic role within the health system.

The knowledge generated through nursing research is key to advancing clinical practice, as it allows improving the quality of care, optimizing health outcomes and ensuring efficient, safe and evidence-based interventions.

To successfully face these challenges, the nursing professional must integrate concepts of management, health policy and analysis of health models and systems. This critical domain allows them to understand the impact of these factors on the quality of care and actively contribute to the transformation and sustainability of the health system.
